

With the Video On Demand (VOD) function of Macnetix patients experience entertainment in best quality.

## Advantages of **SIEMENS HiMed**

**Patients** are offered Internet usage and as well a connection to the house-internal intranet next to extensive comprehensive entertainment options like television, VOD, radio or gaming consoles with the HiMed solution. They can surf the net, gather information via a patient portal and use an existing application from the bed.

Due to a connection to the hospital information system, **doctors and care personnel** can view data like the electronic patient file directly at the bedside and undertake necessary measures and entries. Siemens HiMed supports the identification of the users with smartcards.

Ultimately, the **hospital** also benefits from this, because through proceeds from the offered services (telephone, TV, Internet and VOD) and the optimisation of the processes at the patients bed, the profitability and attractiveness of the house are improved.

## Video on Demand

VOD by Macnetix is a solution fully integrated in Siemens HiMed. It can be easily operated and calculated, an age-protection function is also installed.

The users can choose between different content packages and languages. A service that may also play a role in the selection of the clinic and thus is a competitive advantage.

### Up to date content

- Constantly new movies
- Automatic updates
